

Twenty-five features asked for. Twenty-one more that were not.

Everything in the proposal, and everything built on top of it, written out one by one with the real screen beside it. Nothing here is a plan or a design — every page is a photograph of the product as it runs today.

SCREENS
PHOTOGRAPHED

8

KINDS OF USER

Prepared for the client.

Captured live against [onyx-lms-v2.vercel.app](#), signed in as a student, a lecturer, an examinations officer, a placement officer, an employer, a guardian, an administrator and the platform operator.

The twenty-five, as asked for

Every requirement in the proposal, grouped the way the proposal grouped them. Each one is shown working later in this document, with the screen it was found on.

ONYX LEARN

01	Browse and join courses	DELIVERED
02	Video, reading and document lessons	DELIVERED
03	Attendance, by QR code or by hand	DELIVERED
04	Homework: set it, mark it, hand it back	DELIVERED
05	One screen: what to do next	DELIVERED
06	Ask a question, get a real answer	DELIVERED

ONYX CODE LAB

07	Write and run real code, in the browser	DELIVERED
08	Code runs safely, every time	DELIVERED
09	Marked automatically, the instant it runs	DELIVERED
10	A library of practice problems	DELIVERED
11	Real, multi-file coding projects	DELIVERED

ONYX ASSESS

12	Scheduled, timed online tests	DELIVERED
13	Exam integrity, watched and then judged by a person	DELIVERED
14	Marking: automatic where it can be, by hand where it matters	DELIVERED
15	Results, the moment they are released	DELIVERED

ONYX CAREER

16	Live coding contests	DELIVERED
17	Practice job interviews	DELIVERED
18	Certificates an employer can check for themselves	DELIVERED
19	Jobs, applications and employers	DELIVERED
20	A profile built to be sent to an employer	DELIVERED

ONYX CAMPUS

22	Examinations, start to finish	DELIVERED
23	Fees, payments and receipts	DELIVERED
24	Parents, only where the learner says so	DELIVERED
25	Secure by design, not by promise	DELIVERED

The twenty-one that were never asked for

None of these appear anywhere in the twenty-five requirements. They are not engineering practices or internal checks — each one is a capability somebody at your institution can open and use, and each is in the product today.

FOR YOUR LEARNERS

01	A resume builder, and a profile worth sharing	BUILT
02	A readiness score that explains itself	BUILT
03	Web-page problems, not only code problems	BUILT

FOR TEACHING

04	A check-in code that defeats proxy attendance	BUILT
05	Questions that get closed, not just answered	BUILT
06	Cohorts can be retired, not only deleted	BUILT

FOR EXAMINATIONS

07	Parallel papers, rotated down the register	BUILT
08	Anonymous marking, and a gate before publication	BUILT
09	Seating plans, and every script downloadable	BUILT
10	Integrity flags a named person decides on	BUILT

FOR CREDENTIALS

11	A certificate that keeps answering after it is withdrawn	BUILT
12	Verification with no account at all	BUILT

FOR SELLING COURSES

13	Live Classes — paid cohort programmes	BUILT
14	Courses sold one at a time	BUILT
15	A complete public storefront	BUILT

FOR RUNNING THE PLATFORM

16	An operator console above every institution	BUILT
17	Each institution's settings in its own hands	BUILT
18	A permission matrix anyone can read	BUILT
19	A record of what the platform team does	BUILT
20	Other software can connect, with permission	BUILT
21	A dark theme across the whole product	BUILT

Onyx Learn

Courses, lessons, attendance and homework — the part every learner touches daily.

01 · Delivered

Browse and join courses

Every course the institution offers, in one place. Depending on how a course is set up a learner joins it instantly, pays to unlock it, or is added by the institution — all three routes were used during this check.

The screenshot displays the Onyx EduTech learner dashboard for a student at Malla Reddy University. The interface is divided into a sidebar, a top header, and a main content area.

Sidebar: Contains navigation links for Dashboard, Courses (active), Live Classes, Practice, Workspaces, Assessments, Examinations, Contests, Timetable, Help, Jobs, Resume, Your profile, and Inbox. At the bottom, it shows the user's email (alpha-cse.001@mrmdemo.test) and a Sign out button.

Top Header: Displays the Onyx EduTech logo, a clock icon, a notification bell, and the user's initials (AL).

Main Content Area:

- Courses Section:** States "You are taking 3 courses".
- MY COURSES:** A grid of three course cards:
 - PYTHON (PY122):** 1441 enrolled, Dr Anjali Rao. No lessons published yet. [Start]
 - WEB DEVELOPMENT (WD101):** 12 enrolled, Dr Anjali Rao. No lessons published yet. [Start]
 - QA E2E Audit — Applied Algorithms (QAE101):** 3 enrolled, Dr Anjali Rao. Progress bar at 0% (0 of 3 lessons). [Start]
- ALL COURSES:** A grid of 12 locked course cards, each with a "Buy for ₹300.00" button:
 - AC138: AZURE CLOUD AND ARCHITECT (0 enrolled, No faculty assigned)
 - AC146: ACCA F4 (BUSINESS & CORPORATE LAW) (0 enrolled, No faculty assigned)
 - AD184: ANDROID APP DEVELOPMENT (0 enrolled, No faculty assigned)
 - AD133: AUTOCAD-CIVIL (0 enrolled, No faculty assigned)
 - AE148: ADVANCE EXCEL (0 enrolled, No faculty assigned)
 - AI186: ARTIFICIAL INTELLIGENCE (0 enrolled, No faculty assigned)
 - AP163: ASPEN PLUS (0 enrolled, No faculty assigned)
 - AR118: AR/VR (0 enrolled, No faculty assigned)
 - AW133: AMAZON WEB SERVICE (0 enrolled, No faculty assigned)
 - BA138: BUSINESS ANALYTICS (0 enrolled, No faculty assigned)
 - BI149: POWER BI (0 enrolled, No faculty assigned)
 - BI152: BIOINFORMATICS (0 enrolled, No faculty assigned)

What a learner sees: their courses, and the full catalogue </onyx/courses>

02 • Delivered

Video, reading and document lessons

A course can mix video, documents, images, links and written pages. Every kind of lesson — not just video — remembers exactly where a learner stopped, so moving from a phone to a laptop carries on from the same line.

A real lesson, part-finished, with progress kept automatically </onyx/courses/626/lessons/466>

03 • Delivered

Attendance, by QR code or by hand

The teacher opens a session and a code goes on the projector. Learners scan it with their own phone — no app. The code redraws itself every 15 seconds, so a photograph sent to a friend outside the room is dead within half a minute. The register can also be marked by hand, and every learner carries a running percentage.

A live session: rotating code on the left, the register filling on the right </onyx/courses/593/attendance/601>

04 • Delivered

Homework: set it, mark it, hand it back

Work is set with its marking guide attached, handed in online, and comes back with a score and written feedback. Late work is handled by the institution's own rule rather than by the teacher remembering it.

Real work, handed in, marked against real criteria </onyx/assignments/119>

05 • Delivered

One screen: what to do next

The learner's home screen answers one question — what should I do right now. The course they were last in, the work that is due, a streak counted from real activity, and a readiness score that says out loud which single thing would raise it fastest.

A learner's own dashboard, with its reasoning on show </onyx/dashboard>

Ask a question, get a real answer

Questions are asked on the course itself, where the people teaching it can see them. If one goes unanswered it becomes a support ticket with a clock on it, so a real problem is never left sitting in a thread.

The help queue, and how the product explains its own process /onyx/support

Onyx Code Lab

A real editor, real execution and instant marking, with nothing to install.

07 · Delivered

Write and run real code, in the browser

Nothing to install. A learner writes code in the same kind of editor a professional developer uses, presses Run, and sees what their program actually printed.

The editor, open on a real problem, with its constraints and examples `/onyx/practice/125`

08 · Delivered

Code runs safely, every time

Every run happens inside a locked-down space that cannot reach the internet, cannot take more than its share of the machine, and cannot touch anybody else's work. Confirmed the only way worth confirming it: by attacking it.

Real code, really executed, with the real answer coming back `/onyx/practice/125`

09 · Delivered

Marked automatically, the instant it runs

Work is checked against prepared cases — some shown to the learner, some kept hidden — with partial credit for partly right, and feedback that names what happened rather than just passing or failing.

One of one cases passed, in 11 milliseconds `/onyx/practice/125`

10 • Delivered

A library of practice problems

Organised by difficulty and by topic, with hints that cost something to reveal and worked solutions that stay locked until a learner has earned them.

Practice
Work through problems and get graded instantly.

PROBLEMS IN THE BANK

Difficulty	Percentage	Count
Easy	58%	7
Medium	33%	4
Hard	8%	1

A learner's papers: open now, closed, or still being marked </onyx/assessments>

13 · Delivered

Exam integrity, watched and then judged by a person

Where an exam calls for it, camera and screen are watched and anything odd is flagged. The console orders attempts worst-first — and a flag is evidence for a human to weigh, never an automatic fail.

The screenshot shows the 'Invigilation' dashboard for Malla Reddy University. It features a sidebar with navigation options like Dashboard, Courses, Live Classes, Practice, Practice submissions, Workspaces, Assessments, Examinations, and Invigilate (highlighted). The main content area includes a status bar at the top indicating 'No attempt is running', '1 flagged', and '2 events awaiting review'. Below this are four summary cards: 'FLAGGED ATTEMPTS' (1), 'AWAITING REVIEW' (1), 'RUNNING NOW' (0), and 'DECIDED' (0). A table titled 'EXAMINATIONS' shows a 'Sitting now' section with columns for ATTEMPT, CAMERA, SCREEN, LEFT THE PAPER, and FLAG SCORE. Below this is a 'Review queue' table with columns for ATTEMPT, SEVERITY, FLAG SCORE, STILL OPEN, and CASE. The queue shows a single entry for 'MRD-ALPHA-CSE-001 - Sneha Rao' with a 'Medium' severity and a 'Flag Score' of 3. A 'QA Audit - Algorithms Class Test' section is also visible, showing '1 flagged attempt', '2 still open', and '0 of 1' decided.

The invigilation console, saying plainly what a flag is and is not `/onyx/invigilate`

14 · Delivered

Marking: automatic where it can be, by hand where it matters

Objective questions are marked the moment they are submitted. Written answers go to a person with the marking guide in front of them, with a second pair of eyes available before anything is published.

The screenshot shows the 'Assessments' dashboard for Malla Reddy University. It features a sidebar with navigation options like Dashboard, Courses, Live Classes, Practice, Practice submissions, Workspaces, Assessments (highlighted), Examinations, and Invigilate. The main content area includes a status bar at the top indicating 'Assessment schedule' (44) and 'Assessment question bank' (91). Below this are four summary cards: 'PUBLISHED' (44), 'IN DRAFT' (0), 'AWAITING RESULTS' (37), and 'RELEASED' (0). A table titled 'PAPERS' shows a list of assessments with columns for ASSESSMENT, COURSE, WINDOW, SET BY, and STATE. The table lists several assessments, including 'PYTHON - class test' and 'Web development test' entries, with their respective states (Open, Marking, Mark) and actions (Open, Mark).

A marking queue, with real papers waiting on a real person `/onyx/assessments`

Results, the moment they are released

A learner sees their score, their grade and how the cohort did, in one place — and sees none of it until the institution releases it, however long the marking takes.

The screenshot shows the Onyx EduTech interface for a student at Malla Reddy University. The page is titled "Results" and includes a sub-header "Published results only. A mark appears here once it has been released." Below this, there are two tabs: "Assessments" (active) and "Grades".

Assessments Section:

- RELEASED:** 2 papers marked
- PASSED:** 1 (some papers set no pass mark)
- BEST:** 80% (highest paper so far)
- AVERAGE:** 65% (across released papers)

Assessment Details:

- QA Audit — Algorithms Class Test:** 80% (Passed - pass mark 2, Grade 4 JS)
- PYTHON — class test:** 50% (Marked, Grade 4 JS)

Grades Section:

- MARKS RELEASED:** 1 (on your record)
- AVERAGE MARK:** 4 (across every released mark)
- MODERATED:** 0 (marks were adjusted)

Grade Details:

- QA Audit — Algorithms Class Test:** Grade Pass (Grade 4)

19 • Delivered

Jobs, applications and employers

Employers post roles, learners apply against stated eligibility rules, and the placement office runs the pipeline. Each employer sees exactly their own applicants — and no other company's.

A learner's applications </onyx/jobs>

The employer's own posts </onyx/jobs>

20 • Delivered

A profile built to be sent to an employer

A shareable profile where every skill traces back to real evidence, plus a resume builder that assembles an A4 PDF from the learner's record at the moment they press the button — so it can never be out of date.

Your profile

What you have done here, and what it adds up to.

Finish your profile 0% 8 things left

None of this is required — but a profile with these filled in is the one a placement officer or an employer can actually read.

- Add a photo**
A face is remembered on a shortlist, a gray circle is not.
- Write a headline**
One line under your name. It is the first thing anybody reads.
- Write a short bio**
A paragraph in your own words, rather than a list of marks.
- List your skills**
The ones you would claim yourself, alongside the ones named here.
- Add a phone number**
How your institution reaches you about a placement at short notice.
- Link something of yours**
A portfolio, a repository, a profile elsewhere.

YOUR DETAILS

Your name: Sneha Rao
This is the name on your registers, results and certificates at Malla Reddy University (Demo).

Add a picture

Phone: Optional
Seen by your institution, and by an employer only if you put it on your resume.

Email address

The profile, and what it says is still missing `/onyx/profile`

Onyx Campus

Programmes, examinations, money, parents and the security under all of it.

21 • Delivered

Programmes, terms and timetables

Programmes, terms, cohorts, who teaches what and when — set up and published from one console, with a double-booked room or teacher refused before it ever reaches a learner's timetable.

A programme with its term and its cohort, set up live during this check `/onyx/programs`

22 • Delivered

Examinations, start to finish

Scheduling, seating, marks entry, moderation and publication — with the candidate's script and the marker's copy both downloadable as PDFs.

The screenshot shows the 'Examinations' dashboard for Malla Reddy University. The left sidebar contains navigation links: INSTITUTION, EXAMINATIONS (with sub-links for Assessments, Invigilate, Examinations, Timetable, and Certificates), Inbox, and Your profile. The main content area is titled 'Examinations' and includes a note: 'No learner is ever scheduled for two papers at once -- the calendar refuses that before it happens.' Below this, there are tabs for 'Exam schedule' (5) and 'Exam paper' (91). A 'Schedule an exam' button and an 'Add a hall' button are present. A summary section shows: SCHEDULED (5 papers on the calendar), IN PROGRESS (0 sitting right now), UPCOMING (0 all scheduled), and COMPLETED (5 sat, awaiting or holding marks). A table lists completed exams with columns: EXAM, WHEN, DURATION, OUT OF, SCHEDULED BY, and STATUS. The table includes entries for QA Audit, PYTHON, and WEB DEVELOPMENT exams, all marked as 'Awaiting results'.

The examinations office's own calendar, mid-term [/onyx/exams](#)

23 • Delivered

Fees, payments and receipts

Fee structures, invoices, online payment, receipts and who still owes what — with course and live-class income tracked apart from fee income so the books never blur.

The screenshot shows the 'Finance' dashboard for Malla Reddy University. The left sidebar contains navigation links: INSTITUTION, Finance, Dashboard, Courses, Live Classes, CODE LAB, Code Lab, Practice submissions, Workspaces, ASSESSMENT, Assessments, Invigilate, Examinations, Contests, Certificates, CAMPUS, Programmes, Timetable, Students, Faculty, Finance (selected), CAREER, Placement, and Jobs. The main content area is titled 'Finance' and includes a note: 'INR 0.00 outstanding across 0 invoices'. A summary section shows: OUTSTANDING (INR 0.00, 0 invoices unsettled), OVERDUE (INR 0.00, 0 past their due date), OLDEST DEBT (nothing is late), and LEARNERS (0 with something overdue). A 'PAYMENTS RECEIVED' section shows: COLLECTED (INR 300.00, settled payments), FROM FEES (INR 0.00, invoices settled), FROM COURSES (INR 300.00, locked courses bought), and FROM LIVE CLASSES (INR 0.00, registrations taken). A 'PAYERS' section shows 2 distinct learners. Below this, there are tabs for 'Everything 3', 'Fee payments 0', 'Course purchases 1', and 'Live Classes 2'. A table lists payments with columns: PAID, LEARNER, FOR, REFERENCE, METHOD, AMOUNT, and STATUS. The table includes entries for Varun Verma and Vivaan Kumar, both marked as 'Paid'.

Real payments, against real learners, split by what they paid for [/onyx/finance](#)

24 • Delivered

Parents, only where the learner says so

A guardian signs in and sees attendance, results and fees — but only after the learner invites them, and only the parts the learner switched on. The learner can withdraw any of it at any time.

What a linked guardian sees, and what they are told they cannot /onyx/family

25 • Delivered

Secure by design, not by promise

One institution's data is unreachable from another's. Every role sees only what it is allowed to, written in plain words rather than buried in a config file. Every consequential action is written to a record nobody can edit afterwards. 140 deliberate attempts to read another institution's data — none succeeded.

What each role may do, editable per institution /onyx/permissions

The permanent record: who, what, when, and from where /onyx/audit

The extra features, one by one

The same twenty-one, described properly. Where one has a screen of its own, it is here.

For your learners

3 EXTRA FEATURES

Extra 01

A resume builder, and a profile worth sharing

A learner assembles an A4 resume from their own record in one click. It is rebuilt from live data every time, so it cannot go stale, and they can switch on a public profile page to send an employer.

The screenshot shows the Onyx EduTech Resume Builder interface. The header includes the Onyx EduTech logo and user avatars. The left sidebar contains navigation links: Dashboard, Courses, Live Classes, Practice, Workspaces, ASSESSMENT (Assessments, Examinations, Contests), CAMPUS (Timetable, Help), and CAREER (Jobs, Resume, Your profile, Inbox). The main content area is titled 'Resume' and shows a resume for 'Sneha Rao' (alpha-cse.001@mrdemo.test). The resume is divided into sections: COURSES (PYTHON: PY122 - 3 credits; WEB DEVELOPMENT: WD101 - 3 credits; QA E2E Audit — Applied Algorithms: QAE101 - 4 credits) and PROJECTS (demo02: web, 2026). The right sidebar contains a 'READY TO SEND' section with a 30% progress bar, a 'DO THIS NEXT' section with a 'Write your objective' prompt, an 'Objective' section with a text area and a 'Save' button, a 'What to include' section with a dropdown, and an 'Anything else' section with a dropdown. The bottom of the sidebar shows the user's email (alpha-cse.001@mrdemo.test) and a 'Sign out' button.

Built from the record itself, not a stored copy `/onyx/resume`

Extra 02

A readiness score that explains itself

Not just a number out of a hundred. The points still unearned are broken out and ranked, so a learner is told which single thing is worth the most to them right now.

The score, with its own reasoning beside it `/onyx/dashboard`

Extra 03

Web-page problems, not only code problems

Alongside ordinary exercises a learner can be set an HTML, CSS and JavaScript build with a live preview of the page they are making, marked by a person who sees the rendered result.

For teaching

3 EXTRA FEATURES

Extra 04

A check-in code that defeats proxy attendance

The proposal asked for a QR code or a paper register. What exists rotates the code every fifteen seconds and accepts it for its own cycle and the next only, so a photograph sent to a friend outside the room is useless within half a minute.

The code on the projector, redrawing itself </onyx/courses/593/attendance/601>

Extra 05

Questions that get closed, not just answered

The learner who asked marks the reply that actually answered them, and useful answers are voted up. Anything still unanswered becomes a ticket with a deadline and an owner's name on it.

Extra 06

Cohorts can be retired, not only deleted

A section that has moved on is closed so it stops appearing everywhere, without destroying the record of who was in it.

For examinations

4 EXTRA FEATURES

Extra 07

Parallel papers, rotated down the register

The proposal asked for randomised banks. A bank here holds whole parallel papers, and a scheduled examination hands them out by roll number, so nobody within sight of a neighbour is sitting the same paper.

Extra 08

Anonymous marking, and a gate before publication

A marker can be shown Candidate 1 rather than a name, and results can be held back until every attempt has been past a second pair of eyes.

Extra 09

Seating plans, and every script downloadable

Halls are filled in seat order, and a candidate's script can be downloaded on its own or for the whole sitting at once.

Extra 10

Integrity flags a named person decides on

Events carry weights and roll into a score banded high, medium and low, ordered worst first. Each is dismissed or upheld by a named person, the decision is kept, and the candidate can see the outcome.

For credentials

2 EXTRA FEATURES

Extra 11

A certificate that keeps answering after it is withdrawn

A revoked credential is never deleted. Its public page keeps resolving and says the credential was withdrawn — the only answer of any use to whoever is holding a copy of it.

The screenshot shows the 'Certificates' management page in the Onyx EduTech system. The page is for 'Malla Reddy University (Demo)' and is accessed by an 'Administrator'. It features a sidebar with navigation links: Dashboard, Courses, Live Classes, Code Lab, Practice submissions, Workspaces, Assessments, Invigilate, Examinations, Contests, Certificates (selected), Campus, Programmes, Timetable, Students, Faculty, Finance, Career, Placement, and Jobs. The main content area is titled 'Certificates' and shows a summary of certificate status: 4 Issued (since this register opened), 2 In Force (verifiable by anyone with the id), 0 Expired (lapsed, never deleted), and 2 Revoked (still answer on the public page). Below this is a table of certificates with columns: CERTIFICATES, HOLDER, CREDENTIAL ID, ISSUED, and STATE. The table lists four certificates: 'Certified Full-Stack Web Development' (Course Certificate) issued today, 'Certified Full-Stack Web Development' (Course Certificate) issued today, 'Console-issued — Applied Algorithms' (Course Certificate) issued 2 days ago, and 'Applied Algorithms — Course Completion' (Course Certificate) issued 4 days ago. The first two are 'In force', while the last two are 'Revoked'. A note at the bottom states: 'A credential is never deleted. Revoking records who did it and why, and the public page keeps answering — it says the credential was revoked rather than that it was never issued, which is the only answer useful to whoever is holding it. Both issuing and revoking are written to the audit log.'

In force and withdrawn, both kept on the register `/onyx/certificates`

Extra 12

Verification with no account at all

Whoever is checking a certificate signs up for nothing. They open the page and it tells them what the issuer published, and nothing else.

The screenshot shows the 'Credential check - Onyx' page. It features a green box with a checkmark and the text 'This credential is valid' and 'Checked against the issuer just now'. Below this, the details of the credential are listed: 'AWARDED TO Karthik Shetty', 'FOR Certified Full-Stack Web Development', 'ISSUED BY Malla Reddy University (Demo)', 'ISSUED Today', and 'EXPIRES Does not expire'. The credential ID is 'A1C73C23EA19F5364C7F8426D190AD06'. A note at the bottom states: 'This page shows only what the issuing institution chose to publish. Nothing here can be edited by the holder.'

For selling courses

3 EXTRA FEATURES

Extra 13

Live Classes — paid cohort programmes

Four-, twelve- and sixteen-week live programmes with their own pricing, paid registration and a named certificate at the end.

Extra 14

Courses sold one at a time

A locked course carries a price and is bought before it opens, and that revenue is reported apart from institutional fee income.

Course income, kept separate from fees /onyx/finance

Extra 15

A complete public storefront

A marketing site with its own catalogue and price filters, workshops, instructor pages, a knowledge base, cart, checkout, coupons, a wishlist, purchase history and invoices — effectively a second application beside the institutional one.

For running the platform

6 EXTRA FEATURES

Extra 16

An operator console above every institution

Create, suspend or remove an entire institution — and, where a customer wants it, run theirs for them: their students, staff, courses, timetable, fees and help queue, without them ever signing in.

Every institution on the platform `/onyx/platform`

One of them, run from above `/onyx/platform/tenants/798`

Extra 17

Each institution's settings in its own hands

Whether learners may register themselves, which email domains are accepted, the community link on the jobs page — changed by the institution, not by a support request.

An institution's own controls `/onyx/settings`

Extra 18

A permission matrix anyone can read

Ten areas of permission, editable for every role, written as plain sentences — with a reset to defaults, and wording that explains a tick grants the act, not the reach.

Roles and permissions

What each role may do here, and what has been decided about one person.

BY ROLE

Administrators hold every permission here and always will. Each tick lets that role attempt the act; what they may do is unchanged — a lecturer with "Author content" still only reaches courses they teach.

Reset to defaults

Extra 20**Other software can connect, with permission**

An outside application can ask a signed-in user for permission to act on their behalf, and that permission can be taken back at any time.

Extra 21**A dark theme across the whole product**

Every screen, not a subset, and checked for contrast in both themes.

IN CLOSING

Forty-six features, and a product you can open right now.

Twenty-five were promised in the proposal and twenty-five are running. Twenty-one more were built on top of them, and every one of those is something a learner, a lecturer, an examinations officer or your own operations team can use — not an internal engineering detail.

Every screen in this document was opened, used and photographed in the live product while it was being written: a learner sat a practice problem and it was graded, a lecturer opened a register and the check-in code rotated on screen, a certificate was issued and then verified by somebody with no account at all.

What is left is your content, your people and your calendar — not more software.

Onyx LMS · the feature book · prepared for the client.

Requirements as written in the proposal; extras as verified during the independent quality review. Every image captured live against `onyx-lms-v2.vercel.app`.
