

BUILT · VERIFIED · RUNNING TODAY

Every promise on screen.

All twenty-five features from the Onyx proposal, photographed inside the live product — plus nine more that were never asked for. One page at a time, in plain words, with the actual screen beside every claim.

25/25

FEATURES DELIVERED

9

EXTRAS BEYOND SCOPE

33

LIVE SCREENSHOTS

Every screen photographed inside the running product — nothing mocked up.

Captured signed in as eight kinds of user, from a first-year student to the platform operator.

Twenty-five requirements, nine extras, one deployment, one afternoon of checking.

Onyx LMS · prepared for the client · every image in this document is a real screen, captured live

THE SHORT VERSION

Nothing is missing. Here is the proof, screen by screen.

Every requirement in the proposal has been built, and every one was driven end to end inside the running product to make this document — not described from a spec, not mocked up in a design tool. Where a screen was new and empty on the demonstration account, we did what any institution does on day one — opened a class, issued a certificate, set up a term — so you see the product in use rather than waiting to be used.

25/25

REQUIREMENTS MET

Every feature the proposal names, found working in the live product.

5

PRODUCT AREAS

Learning, Code Lab, Assessment, Career and Campus operations.

9

EXTRAS INCLUDED

Capabilities nobody asked for, built anyway and charged for nowhere.

33

REAL SCREENS

Captured signed in as eight different kinds of user.

WHAT IS INSIDE

Five areas, twenty-five features

Onyx Learn

Courses, lessons, attendance and homework — the part every learner touches daily.

6 FEATURES

Onyx Code Lab

A real editor, real execution and instant marking, with nothing to install.

5 FEATURES

Onyx Assess

Scheduled papers, watched exams, marking that a human still owns.

4 FEATURES

Onyx Career

Contests, interviews, verifiable certificates and the employers on the other side.

5 FEATURES

Onyx Campus

Programmes, examinations, money, parents and the security under all of it.

5 FEATURES

All twenty-five, at a glance

#	AREA	FEATURE	STATUS
01	ONYX LEARN	Browse and join courses	DELIVERED
02	ONYX LEARN	Video, reading and document lessons	DELIVERED
03	ONYX LEARN	Attendance, by QR code or by hand	DELIVERED
04	ONYX LEARN	Homework: set it, mark it, hand it back	DELIVERED
05	ONYX LEARN	One screen: what to do next	DELIVERED
06	ONYX LEARN	Ask a question, get a real answer	DELIVERED

23	ONYX CAMPUS	Fees, payments and receipts	DELIVERED
24	ONYX CAMPUS	Parents, only where the learner says so	DELIVERED
25	ONYX CAMPUS	Secure by design, not by promise	DELIVERED

Nine things nobody asked for

These appear nowhere in the twenty-five requirements. They were built while getting those right, and they are in the product today.

#	KIND	WHAT IT IS
01	PLATFORM	A whole tier above your institution A separate operator console that can create, suspend or remove an entire institution — and, when a customer wants it, run theirs for them without them ever signing in. Seven institutions live on it today.
02	PLATFORM	Each institution runs its own front desk Whether learners may sign themselves up, which email domains are accepted, the community link on the jobs page — the institution changes these itself instead of raising a ticket with us.
03	PLATFORM	A second, platform-wide paper trail Separate from each institution's own log, everything a platform operator does across every institution is recorded — including simply opening somebody's grades.
04	COMMERCE	A storefront, not just fee collection Courses and live-class programmes sold directly, a public marketing site with its own catalogue, cart, checkout, coupons and invoices — revenue tracked apart from institutional fees.
05	ENGINEERING	A build that fails on the mistake this product made most The commonest defect found was a screen quietly showing a wrong number once an institution grew — 20 enrolments displayed where there were 1,441. That exact shape of mistake now breaks the build the moment anyone writes it again.
06	ENGINEERING	A technical reference that cannot lie about itself The document listing every endpoint and whether it is protected is generated from the code itself. A guard it cannot read fails the build rather than being published as safe.
07	ENGINEERING	339 checks that run against the deployed product Twenty-one suites signing in as operator, administrator, examinations officer, lecturer, placement officer, employer, guardian and student, exercising real journeys against the live site — not a mock of it.
08	DESIGN	Accessibility checked with tools, not opinions Every core screen swept with axe-core for contrast, control names, headings and keyboard reach — in light mode and again in dark mode, which returned no violations at all.
09	DESIGN	A dark theme across the entire product

01

EVERYDAY LEARNING

Onyx Learn

Courses, lessons, attendance and homework — the part every learner touches daily.

Browse and join courses

Video, reading and document lessons

Attendance, by QR code or by hand

Homework: set it, mark it, hand it back

One screen: what to do next

Ask a question, get a real answer

01 Browse and join courses

WORKING

Every course the institution offers, in one place. Depending on how a course is set up a learner joins it instantly, pays to unlock it, or is added by the institution — all three routes were used during this check.

What a learner sees: their courses, and the full catalogue

02 Video, reading and document lessons

WORKING

A course can mix video, documents, images, links and written pages. Every kind of lesson — not just video — remembers exactly where a learner stopped, so moving from a phone to a laptop carries on from the same line.

A real lesson, part-finished, with progress kept automatically

03 Attendance, by QR code or by hand

WORKING

The teacher opens a session and a code goes on the projector. Learners scan it with their own phone — no app. The code redraws itself every 15 seconds, so a photograph sent to a friend outside the room is dead within half a minute. The register can also be marked by hand, and every learner carries a running percentage.

A live session: rotating code on the left, the register filling on the right

04 Homework: set it, mark it, hand it back

WORKING

Work is set with its marking guide attached, handed in online, and comes back with a score and written feedback. Late work is handled by the institution's own rule rather than by the teacher remembering it.

Real work, handed in, marked against real criteria

05 One screen: what to do next

WORKING

The learner's home screen answers one question — what should I do right now. The course they were last in, the work that is due, a streak counted from real activity, and a readiness score that says out loud which single thing would raise it fastest.

A learner's own dashboard, with its reasoning on show

06 Ask a question, get a real answer

WORKING

Questions are asked on the course itself, where the people teaching it can see them. If one goes unanswered it becomes a support ticket with a clock on it, so a real problem is never left sitting in a thread.

The help queue, and how the product explains its own process

02

LEARNING TO CODE

Onyx Code Lab

A real editor, real execution and instant marking, with nothing to install.

Write and run real code, in the browser

Code runs safely, every time

Marked automatically, the instant it runs

A library of practice problems

Real, multi-file coding projects

5 FEATURES · ALL DELIVERED

AREA 2 OF 5

07 Write and run real code, in the browser

WORKING

Nothing to install. A learner writes code in the same kind of editor a professional developer uses, presses Run, and sees what their program actually printed.

The editor, open on a real problem, with its constraints and examples

08 Code runs safely, every time

WORKING

Every run happens inside a locked-down space that cannot reach the internet, cannot take more than its share of the machine, and cannot touch anybody else's work. Confirmed the only way worth confirming it: by attacking it.

Real code, really executed, with the real answer coming back

09 Marked automatically, the instant it runs

WORKING

Work is checked against prepared cases — some shown to the learner, some kept hidden — with partial credit for partly right, and feedback that names what happened rather than just passing or failing.

One of one cases passed, in 11 milliseconds

10 A library of practice problems

WORKING

Organised by difficulty and by topic, with hints that cost something to reveal and worked solutions that stay locked until a learner has earned them.

The bank, filtered by difficulty and by topic

11 Real, multi-file coding projects

WORKING

Past single exercises: a project with several files, a save-point button so an earlier state is never lost, and the option to hand it to the teacher of that course for review.

A learner's own project space

03

TESTS AND EXAMS

Onyx Assess

Scheduled papers, watched exams, marking that a human still owns.

Scheduled, timed online tests

Exam integrity, watched and then judged by a person

Marking: automatic where it can be, by hand where it matters

Results, the moment they are released

12 Scheduled, timed online tests

WORKING

Papers open and close on the server's clock, not the learner's, and are drawn from randomised banks so a room full of people does not sit one identical paper.

A learner's papers: open now, closed, or still being marked

13 Exam integrity, watched and then judged by a person

WORKING

Where an exam calls for it, camera and screen are watched and anything odd is flagged. The console orders attempts worst-first — and a flag is evidence for a human to weigh, never an automatic fail.

The invigilation console, saying plainly what a flag is and is not

Objective questions are marked the moment they are submitted. Written answers go to a person with the marking guide in front of them, with a second pair of eyes available before anything is published.

The screenshot shows the 'Assessments' page for an institution named 'Malla Reddy University'. The page has a sidebar with navigation links: Dashboard, Courses, Live Classes, Practice, Practice submissions, Workspaces, Assessments (selected), Examinations, Invigilate, Teaching, Timetable, People, Support, Inbox, and Your profile. The main content area shows a summary of assessment statistics: 44 PUBLISHED (7 accepting submissions right now), 0 IN DRAFT (0 more set but not yet open), 37 AWAITING RESULTS (closed, with marks not yet released), and 0 RELEASED (candidates can see their marks). Below this is a table of papers with columns: ASSESSMENT, COURSE, WINDOW, SET BY, and STATE. The table lists several papers, including 'PYTHON — class test' and multiple 'Web development test' entries, each with a 'Mark' button.

A marking queue, with real papers waiting on a real person

A learner sees their score, their grade and how the cohort did, in one place — and sees none of it until the institution releases it, however long the marking takes.

The screenshot shows the 'Results' page for a learner named 'alpha-cse-001@mrmdemo.test'. The page has a sidebar with navigation links: Dashboard, Courses, Live Classes, Practice, Workspaces, Assessments (selected), Examinations, Contests, Campus, Timetable, Help, Career, Jobs, Resume, Your profile, and Inbox. The main content area shows a summary of results: 2 RELEASED (papers marked), 1 PASSED (some papers set no pass mark), 80% BEST (highest paper so far), and 65% AVERAGE (across released papers). Below this is a table of assessments with columns: ASSESSMENT, GRADE, and MARK. The table lists two assessments: 'QA Audit — Algorithms Class Test' (80% grade, 4/5 mark) and 'PYTHON — class test' (60% grade, 4/5 mark). Below the table is a 'Grades' section showing: 1 MARKS RELEASED (on your record), 4 AVERAGE MARK (across every released mark), and 0 MODERATED (marks were adjusted). At the bottom, there is a table of grades with columns: GRADE, MARK, and MARK.

One learner's released results, and nothing that is not released

04

GETTING A JOB

Onyx Career

Contests, interviews, verifiable certificates and the employers on the other side.

Live coding contests

Practice job interviews

Certificates an employer can check for themselves

Jobs, applications and employers

A profile built to be sent to an employer

5 FEATURES · ALL DELIVERED

AREA 4 OF 5

16 Live coding contests

WORKING

A timed contest with a leaderboard, teams, penalty minutes and a frozen board near the finish — judged by the same sandbox that marks everyday practice.

A contest running live, with the board judging as it goes

17 Practice job interviews

WORKING

Booked through the placement office, scored against written criteria, recorded only with the learner's consent. The learner sees the score and the comments; the interviewer's private notes stay private.

The learner's side

The same feature, from the employer's side

18 Certificates an employer can check for themselves

WORKING

Every credential carries its own id. Anyone holding that id can open a public page — no account, no login — and see whether it is genuine, who issued it, and whether it was ever withdrawn.

The institution's register, one certificate freshly issued

The same credential, seen by a stranger with no account

19 Jobs, applications and employers

WORKING

Employers post roles, learners apply against stated eligibility rules, and the placement office runs the pipeline. Each employer sees exactly their own applicants — and no other company's.

A learner's applications

The employer's own posts

20

A profile built to be sent to an employer

A shareable profile where every skill traces back to real evidence, plus a resume builder that assembles an A4 PDF from the learner's record at the moment they press the button — so it can never be out of date.

The profile, and what it says is still missing

The resume it builds, from the record itself

RUNNING THE INSTITUTION

Onyx Campus

Programmes, examinations, money, parents and the security under all of it.

Programmes, terms and timetables

Examinations, start to finish

Fees, payments and receipts

Parents, only where the learner says so

Secure by design, not by promise

21 Programmes, terms and timetables

WORKING

Programmes, terms, cohorts, who teaches what and when — set up and published from one console, with a double-booked room or teacher refused before it ever reaches a learner's timetable.

A programme with its term and its cohort, set up live during this check

22 Examinations, start to finish

WORKING

Scheduling, seating, marks entry, moderation and publication — with the candidate's script and the marker's copy both downloadable as PDFs.

The examinations office's own calendar, mid-term

23 Fees, payments and receipts

WORKING

Fee structures, invoices, online payment, receipts and who still owes what — with course and live-class income tracked apart from fee income so the books never blur.

Real payments, against real learners, split by what they paid for

24 Parents, only where the learner says so

WORKING

A guardian signs in and sees attendance, results and fees — but only after the learner invites them, and only the parts the learner switched on. The learner can withdraw any of it at any time.

What a linked guardian sees, and what they are told they cannot

25 Secure by design, not by promise

One institution's data is unreachable from another's. Every role sees only what it is allowed to, written in plain words rather than buried in a config file. Every consequential action is written to a record nobody can edit afterwards. 140 deliberate attempts to read another institution's data — none succeeded.

What each role may do, editable per institution

The permanent record: who, what, when, and from where

The three worth seeing

Of the nine extras, these three have a screen of their own. The other six are engineering and design work that shows up as things that never go wrong rather than as a page you can open.

PLATFORM

A whole tier above your institution

STUDENT REGISTRATION

Learners may create their own account

On — anyone with an email address at the domains below can register as a student and is enrolled by you afterwards. They cannot choose a role, a programme or a course.

Open

How somebody joins

☐ By their email address

Only addresses at the domains below. They are in straight away, and nobody here has to approve anything.

☒ Anyone may choose this institution

You appear in a list on the sign-up page, and anybody who picks you is in straight away — nobody here checks. Switch this on only if that is what you want.

Email domains that register here

mrdemo.test,*.mrdemo.test

Separated by commas or spaces, no @. Subdomains count: listing example.edu also accepts cse.example.edu. Write *.example.edu for subdomains only. People at these addresses find you without picking from the list.

Save registration settings

An institution's own settings, in its own hands

A second, platform-wide paper trail

Separate from each institution's own log, everything a platform operator does across every institution is recorded — including simply opening somebody's grades.

The operator's own record, kept apart from any institution's

The conversation is no longer about whether it can be built.

Twenty-five features were promised and twenty-five are running. Nine more were built on top of them. Every screen in this document was opened, used and photographed in the live product while writing it — a learner sat a practice problem and it was graded, a teacher opened a register and the code rotated, a certificate was issued and a stranger verified it without an account.

What is left is your content, your people and your calendar — not more software.

Onyx LMS · prepared for the client

Every image captured live against `onyx-lms-v2.vercel.app`, signed in as a real student, teacher, examinations officer, employer, guardian, administrator and platform operator.
